TTANGO

Fast tests for sex infections (STIs) including chlamydia, gonorrhoea and trichomonas are available at this clinic

Why is the test important?

- ➡ Many people don't know they have a sex infection, because they can look and feel fine, so the only way to find out if you have one is to get tested
- ➡ If left untreated sex infections can cause pain and difficulty in becoming pregnant

It is a good idea to have a test if you have had sex, especially if:

- ✓ You had sex without a condom
- ✓ You had sex with someone new
- ✓ Your partner had a sex infection
- ✓ You have symptoms like pain when weeing, pus or a sore on your private parts, or pain low in your belly
- ✓ You are worried you might have a sex infection

What happens if the test is positive?

- ➡ You will be given medicine today
- ➡ We will ask you who you've had sex with so they can be tested and treated also. This is private.

Ask your health worker, doctor or nurse for a T-TANGO test today!
